	it allows you to print the Payoff of Strategy currently in use. Feature available on the PC with a printer

How to read the General tab

The tab is divided into five main areas which we will describe briefly in this chapter. For each section there is a special page of the manual with a detailed description, with particular attention to all functions available from the right button's menu.

1. The properties of the Strategy

The topmost part of the General tab displays the properties of the strategy as a whole, so with all the parts that make it up (leg and underlying both).

Net Result	At Now	Realized	Equity	Net Result %	Max Profit	Max Risk	% Down BEP	% Up BEP	Days to Expires	Elapsed Days	Delta	Gamma	Theta	Vega	Rho	Delta 1%	Broker Costs	Margin (Theor.)	VaR
€ 88,38	€ 88,38	€ 0,00	€ 0,00	23,52 %	€ 375,75	€ 124,25	9,20 %	8,63 %	169	6	€ 26,04	€ 36,88	€ 0,30	€ 5,85	€ 12,72	€ 4,29	€ 0,00	€ 1.304,48	€ 18,66

By clicking the right mouse button you can access to the following menu:

Choose Properties

Highlight

Move Realized to Realized Equity

- Choose Properties: Opens the Choose Properties to choose which properties are shown. in the chapter below the list of available properties

- Highlight: allows you to enable / disable the highlight when there is an update of each properties

- Move Realized Realized to Equity: this command is present only if in the strategy there is a consolidated (positive or negative), and it allows to transfer the amount consolidated in the property "Realized Equity", then the consolidated amount will no longer be considered in the calculations, and the payoff strategy, it remains present in the Trades and graph Greek Realized

For a list of available properties and their explanation, click [here](#).

2. The legs of the Strategy

This section is the heart of the strategy. There are listed, for each underlying, all legs that have been treated or are at market. A lot of functions are accessible by the right mouse button, for more information click [here](#).

3. The trades of the Strategy

In this section they are listed in chronological order. For each trade is listed all information calculated when the order is registered. Each cell could be edited by double-clicking the mouse. Particular attention should be paid to "Filled Type" and "Filled Quantity". Filled Type indicates the manner in which the order has been registered, it can be paper trading or real market, clicking on the cell with the left mouse button you can change this parameter. Box Filled Quantity remain blue until the order is executed in paper trading or real market. It is also provided a full view, you can access to the full view by using vertical tabs at the left of the software. For more information on the complete view click [here](#).

In this area is also available [Order Manager](#), a console where there are orders sent to the market, you can cancel or change them. Once an order is executed in [Real Market](#) it is saved in the [Trades](#).

4. Chain Options

The [Options Chain](#) is automatically downloaded from the broker once it is selected the underlying. It is fully customizable, in fact you can choose strikes and expires as well as options' property to be visualized. All settings can be selected from the menu available clicking right mouse button. Any transaction which is done on the [Options Chain](#) is immediately displayed on the payoff. For more, click [here](#).

5. The payoff of the Strategy

The Payoff immediately displays the operations that are carried out on the chain options. It is fully customizable through the menu accessible with right mouse button. it is equipped with many graphical tools, such as the individual legs view, the Greek charts, the atnow line, the lines corresponding to the standard deviations and the DPD Forecast Map. It is also provided a full view, you can access to the full view by using vertical tabs at the left of the software. For more information on the complete view click [here](#).

The layout of the Strategy

The General tab is completely customizable as regards the displayed properties and their position. All the sections allow customization, therefore the Chain Options, the Legs section, the Order Manager section, the Trades section and also the general properties of the strategy.

Using the appropriate button on the menu it is possible to save and load your own layouts, but also to save them as Default, so doing all future strategies will have the chosen layout directly.
