Print	it allows to print the Payoff of Strategy currently in use. Feature available on the PC in use if there is a printer

Hedging Type

In "Hedging Type" the user can choose the hedging typology: Continuos or Threshold.

- Continuos: This type of hedging starts neutralizing Delta immediately and it buy/sell the
 instrument to mantain delta-zero for every price fluctuation. The advantage is that delta will be
 always next to zero. The disadvantage is that a huge amount of operations will be needed to
 mantain delta next to zero so we will have high costs of transactions and spreads. Continuos
 Hedging is usually used when the profit target is the free risk rate.
- Threshold: This type of hedging starts neutralizing Delta when underlying price reach to a threshold which is a price established by the user.

Legs to Hedge

In the section "Legs to Hedge" you can choose the legs that you want to include in the calculation of the delta to protect.

Thresholds ON / OFF

2025/11/04 06:43 5/12 Strategy - Hedging

In the section "Hedging Type" is selected Threshold mode, in Thresholds ON / OFF you can set the thresholds, for every legs, in which the hedging will be enabled(ON Level) or disbled (OFF Level).

Assets to Use

In this section you can add the instrument (stocks, futures, options, ETF, etc.) to be used to neutralize delta.

Nota: If you use an ETF as an hedging instrument you need to set the "ETF ratio" of that ETF. You set this parameter in Symbol Manager. It denote the ratio between the underlying and the ETF. Take an example: The underlying is the dj Euro Stoxx 50 and it quote 2800 points, the ETF quote 28, the ETF ratio that you have to set is 100. This rule is valid for long ETF, whether the ETF is short you have to set a negative value.

Orders Type

Name: it displays the instrument used for delta hedging and its settings;

- Order Direction: the user can choose the direction of order used to hedge the delta: Long, Short e Long & Short. This think is useful when options are used to hedge;
- Contract Delta: it represents the delta value expressed in euro of one contract;
- Hedge Priority: The user can choose between Macro Adjustment and Fine Adjustment.
 Depending on the choice made by the user in the system will give priority to instruments indicated by Macro Adjustment to neutralize much of the delta and then use the instrument marked with Fine Adjustment to refine the delta hedging. If multiple instruments is associated with the same priority (Macro Adjustment and Fine Adjustment) the system will balance the delta dividing it evenly among the instruments. The most common use is to use futures as Macro Adjustment and stocks as Fine Adjustment;
- Order Type: the user can choose the type of order to use between Market, Join, Improve, Split, Shave, Hit & Take, Hit & Take +. For the description of Orders Type, click qui;
- Smart Move: the Smart Move system allows the sending of an order and the automatic change pf the price if it is not executed;
- Smart Move Amount (Ticks):it represents the price change between an order and the subsequent expressed in ticks;
- Smart Move Interval (secs): It represents the interval of time between an order and the next;
- Order Placement Mode: Here you choose how Iceberg must manage the delta hedging orders.
 Suggest Only: in this case the generation of an order in Iceberg is reported on the General tab,
 and the pending order is finalized in Real Market o Paper Trading. Paper Trading (Automatic): In
 this case the generation of an order it is automatically finalized Paper Trading. Real Market
 (Manual): in this case the generation of an order appears the book corresponding to sending the
 order in Real Market. Real Market (Automatic): In this case the generation of an order is
 automatically sent to the broker with the price of the type previously set. For any order,
 generation is conditioned to Date Filters.

Frequency

This section allows to set the control frequency of the strategy's delta, or the system will calculate delta. Four modality are disponible:

- Contracts: the system hedge the delta only after the specify number of contract definite in Hedge Min. Quantity is reached. It is possible to choose the minimum amount for every instrument;
- Time Interval: the system checks whether is necessary hedge the delta every Time Interval (minutes);

- Time of Day: The system checks whether is necessary hedge the delta in a determined hour of the day;
- Price Change: The system checks whether is necessary hedge the delta after a % underlying price change .

Data Filters

There are available price filter in order to avoid problem with price exposed by the market maker.

- Max Bid/Ask Spread (Options): it verify that spread between bid and ask of the options in the strategy do not exceed a setted %;
- Tick is not Zero: It verify that last tick for every instrument of the strategy is not zero;
- Max. Tick Interval: it verify that time between a tick and the subsequent occurs within a certain time-range, for every strategy instrument;
- Check Bid/Ask (Underlyings):
- Check Last (Options):

As indicated a check on bid-ask option price price and on the last of the underlying is always effectuate in order to ensure the correct data flow between the broker and iceberg

Preview

A preview of the instrumets used to hedge the delta and related quantity at market (Qty) and the quantity that should be used to neutralize the delta (Hedge Qty).

Charts

Iceberg records every hedging operation in order to premise the user to analize the settings and to optimize the hedging strategy.

Il menu - Charts

Strategy

Strategy		Open the submenu strategy
	New Strategy	It allows to create a new strategy
	Open Strategy	It allows to open a strategy previusly saved
4	Save Strategy	It allows to save the strategy actually in use
Settings		Open the window Strategy Settings for the strategy settings

Hedging

Delta Strategy Chart

Timeframe it is possible to choose the timeframe of the graph which represents the Delta

Hedge Chart

Leg It is possible to choose the instrument for delta hedging, see the graph with profit/loss and the number of contract of delta hedging

Thresholds Analysis

Option	It is possible to choose which option of the strategy the threshold are showed on the underlying graph
Timeframe It is possible to choose which timeframe of the underlying graph the threshold are showed	
Bars Count	It is possible to choose how many bars are showed in the underlying graph

Delta Strategy

In this graph is visualized the delta value of the hedging strategy since it was activated. From the menu you can choose the time frame of the graph.

Hedge Size

This graph shows the number of contracts used in every operations of hedging since hedging was activated. From the menu Hedge chart it is possible to choose, which instrument used to hedge is displayed .

Hedge In / Outcome

2025/11/04 06:43 11/12 Strategy - Hedging

With reference to the chosen instrument in hedge Chart, in this graph are represented all profit / loss related to delta hedging operations.

Thresholds Analysis

In the graph is displayed Thresholds Analysis of the historical graph of the underlying (timeframe e bars count can be selected dal menù Thresholds Analysisi Chart) with the threshold set for the selected option in the menù Thresholds Analysis Chart.

This chart is very useful to analyze the position of the thresholds setted in relation to the number of times that have been touched.

Report

A useful report, accompanied by the underlying tick chart, it provides the user a clear view on the performance of its delta hedging settings.
