

# Market Strategy

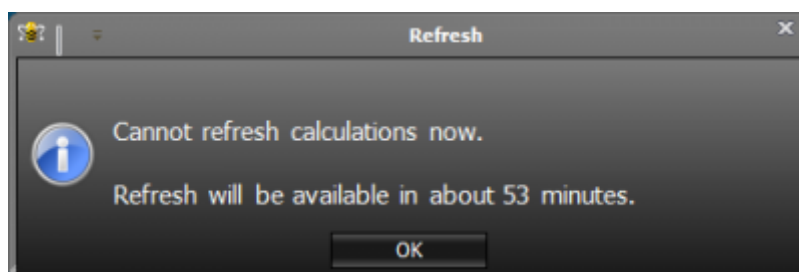

Market Strategy functions shows the payoff of institutional investors. This processing needs of the underlying historical data which will then be required to connected broker.

**In order for Market Strategy working properly it is necessary that the financial instrument under analysis has encoded [Symbol Manager](#) the Option Chain. Financial instruments with Chain Options are written in blue for immediate identification. For the encoding process of the financial instruments in beeTrader® looks manual [Symbol Manager](#) and specific instruction for each broker.**

## Example

“Refresh” button allows to update Market Strategy with new data, you can do a refresh every hour. Clicking on the “Refresh” button, if not already one hour after the last update, a window appears that notifies of the time remaining.

## Strike Step Settings

Set to be used only for indexes, used to view the operations of large movers incorporating those of small traders who also work on intermediate strike on a weekly expires that are not used by institutional.

**In the setting of the strike step should not exceed more than the interval between strike found the first monthly.**

Example: FTSE MIB weekly strike step = 100, first monthly strike step = 250, annual expire strike step = 500. Step to use = 250
