

Market Strategy

Market Strategy functions shows the payoff of institutional investors. This processing needs of the underlying historical data which will then be required to connected broker. The data will then be sent to the server PlayOptions.it to process them.

In order for Market Strategy working properly it is necessary that the financial instrument under analysis has encoded [Symbol Manager](#) the Option Chain. Financial instruments with Chain Options are written in blue for immediate identification. For the encoding process of the financial instruments in beeTrader® looks manual [Symbol Manager](#) and specific instruction for each broker.

Example

“Refresh” button allows to update Market Strategy with new data, you can do a refresh every hour. Clicking on the “Refresh” button, if not already one hour after the last update, a window appears that notifies of the time remaining.

Strike Step Settings

Set to be used only for indexes, used to view the operations of large movers incorporating those of small traders who also work on intermediate strike on a weekly expires that are not used by

institutional.

In the setting of the strike step should not exceed more than the interval between strike found the first monthly.

Example: FTSE MIB weekly strike step = 100, first monthly strike step = 250, annual expire strike step = 500. Step to use = 250
