

Strategy - Planning

Iceberg in this section provides the user a simple but powerful system to automate the trading in options. It also allows to non-programmers to create set certain moves which will be executed automatically. For users with more knowledge a scripting system will be available.

Il menu

Strategy

	it opens the submenu Strategy
	it creates a new Strategy
	it allows to open a previously saved Strategy
	it allows to save the Strategy currently in use
	it opens the window Strategy Settings for the strategy settings
	it opens the window What-If History where there are stored all the transactions carried out by the function What-If

Planning

	It enable or disable the Planning function, whether the button is highlighted the function is active.
---	---

Actions

	it creates a new Plan for the Strategy
	it allows you to edit the selected Plan
	it delete the selected Plan

Edit

 Apply Changes	it confirms the changes made to a Plan
 Cancel Changes	it cancels the changes made to a Plan

Objects

 Start	it allows you to enter the starting point of the Plan
 End	it allows you to enter the end point of the Plan
 Condition	it allows you to insert a condition in the Plan
 Action	it allows you to enter an action in the Plan
 Junction	it allows you to place an hub for the links of the Plan

Links

 Generic Link	it allows you to insert a link between the starting point of the Plan and the condition, between the action and the end point and between actions. It connect the components of a Plan which are not subject to a decision (Yes or No)
 Yes Link	it allows you to insert a link between conditions and actions, in case the condition is verified
 No Link	it allows you to insert a link between conditions and actions, in case the condition is not verified

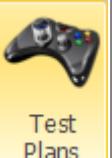

Tools

	it delete the selected object of the Plan
	it allows you to move the selected item to the first level, therefore in foreground
	it allows you to move the selected item to the last level
	it allows you to advance the selected object of a level
	it allows you to move down the selected object of a level

Zoom

	it resets the zoom
---	--------------------

Simulation

	it starts the Plan Test

Plan Object

A Plan consists of various objects that indicate the logical sequence and then how the sequence will be evaluated and executed. We see below what items make up a Plan and their properties.

Start

By clicking the button  you can enter the Start object .

Plan Properties

Name: Rolling a Strike

Check Every: 1 minutes

Order Place Mode: Suggest Only

Real-Time Data Filters

Max Bid/Ask Spread % (Options): 25

Tick is not Zero:

Max. Tick Duration (secs.): 600

Check Bid/Ask (Underlyings): NOTE: Last always checked

Check Last (Options): NOTE: Bid/Ask always checked

Options presents different prices peculiarities, for example very high bid-ask spreads. You can select how to check for prices correctness.

Quick Start

1. Click on New or Edit plan to edit
2. Edit plan properties
3. Place Start object on chart
4. Place other objects on chart as needed
5. Place End object on chart
6. Link objects with Generic, Yes or No links
7. Select the object on chart to edit properties
8. Click Apply to save changes

Do you need more informations ? 

When Start object is selected, as well as the End object, it appears a sidebar with the general settings of the Plan.

- Name: name of the Plan;
- Check Every: You set how many minutes must elapse between a check of the plan and another ;
- Order Place Mode: Here you choose how Iceberg must manage the delta hedging orders.

Pending: In case of a generation of an order Iceberg only show it on the "General" tab and it

must be finalized in [Real Market](#) or [Paper Trading](#). Paper Trading (Automatic): in case of a generation of an order it is automatically put in Paper Trading. Real Market (Manual): In case of a generation of an order the corresponding book to trade it in real market will appear. Real Market (Automatic): In this case an order is automatically sent to the broker with the price type previously set;

- Max Bid/Ask Spread % (Options)
- Tick is not Zero
- Max Tick Interval (secs)
- Check Bid/Ask (Underlying)
- Check Last (Options)

You can only enter a Start object into the Plan, which must be concluded with an End object but you can enable more Plans at once.

End

By clicking the button  you can enter the End object , which must be entered to complete a Plan.

Plan Properties

Name: Rolling a Strike

Check Every: 1 minutes

Order Place Mode: Suggest Only

Real-Time Data Filters

Max Bid/Ask Spread % (Options): 25

Tick is not Zero:

Max. Tick Duration (secs.): 600

Check Bid/Ask (Underlyings): NOTE: Last always checked

Check Last (Options): NOTE: Bid/Ask always checked

Options presents different prices peculiarities, for example very high bid-ask spreads. You can select how to check for prices correctness.

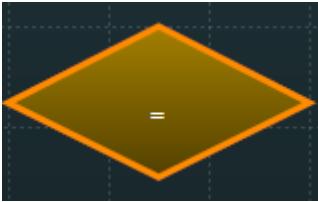

Quick Start

1. Click on New or Edit plan to edit
2. Edit plan properties
3. Place Start object on chart
4. Place other objects on chart as needed
5. Place End object on chart
6. Link objects with Generic, Yes or No links
7. Select the object on chart to edit properties
8. Click Apply to save changes

Do you need more informations? 

Condition

By clicking the button  it is possible to insert the object , which

When Start object is selected, as well as the End object, it appears a sidebar with the general settings of the Plan where you have to set its name and how many minutes must elapse between a check of the plan and another.

contains the condition that will have to be verified. From a Condition object can exit a "Yes" link, which will be connected to the action to take if the condition is verified, or a "No" link, which will be connected to the action to take if the condition is not verified.

Operand 1

Type: AssetsProperties
Which: Eni SpA
Property: Last
Preview: 13.77

Operator

Type: <

Operand 2

Type: CustomValue
Which:
Property: 12
Preview: 12

Object Text [Optional]

Last < 12

Preview

Eni SpA.Last (13.77)
<
12 (12)

Apply Cancel

When "Condition" object is selected, a sidebar with the settings will appear. You have to complete the field.

Operand 1: you have to assign the first term of the comparison, It can be a property of an Asset, a property of a Strategy, a property of a Plan or a Custom value setted by the user;

Operator: You have to choose the mathematical operator;

Operand 2: you have to assign the second term of the comparison, It can be a property of an Asset, a property of a Strategy, a property of a Plan or a Custom value setted by the user;

Object Text: in this field you can assign a short note that will be displayed in the Plan within the object Condition;

Preview: it shows shows the preview of the selected condition.

Action

By clicking the button **Action** it is possible to insert the object "Action", that is the object in which to place the action that will be executed whether the previous condition is verified (Yes Link) or not (No Link)

Action Type

- Activate Plan
- Buy
- De-Activate Plan
- Enable/Disable Delta Hedging
- Flat All
- Flat single Leg
- Immediate Delta Hedging
- Leg Trailing Stop
- Notification Sound
- Rolling
- Sell
- Strategy Trailing Stop

Action Settings

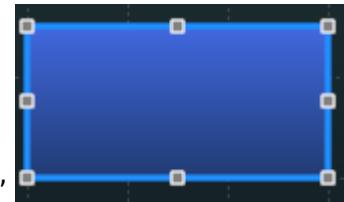

Properties

Leg to Flat	Call @ 14 2016-06-17
Leg to Open	Call @ 15 2016-06-17
Preserve	Amount
Max Quantity	3
Nº Executions	1

Object Text [Optional]

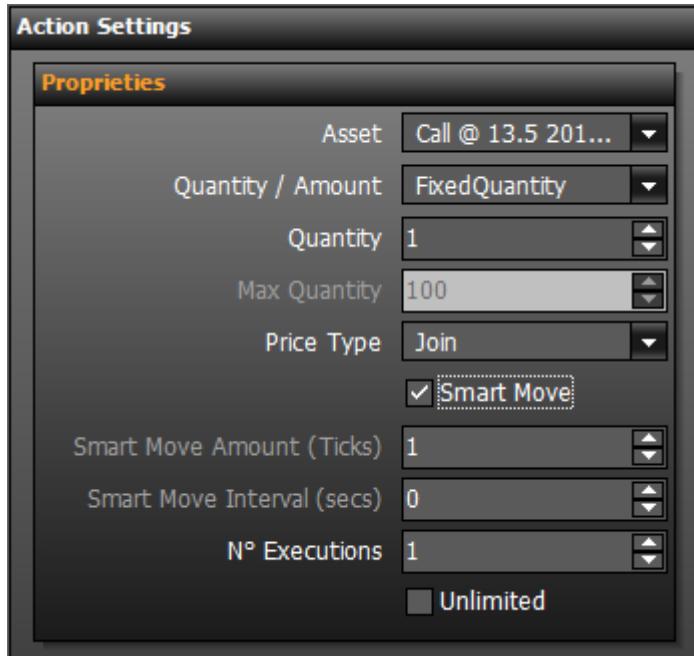

NOTE: Orders will be placed at MARKET price

Apply **Cancel**

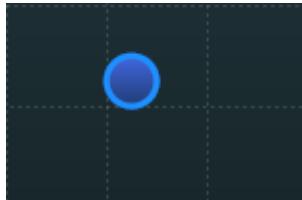

When the Action object is selected, in the right sidebar we have a list of all actions that can be assigned to it and its settings

For every "Action Type" are available some "Action Settings". In "Action Settings" are collected all settable parameters related to the "Action Type" selected.

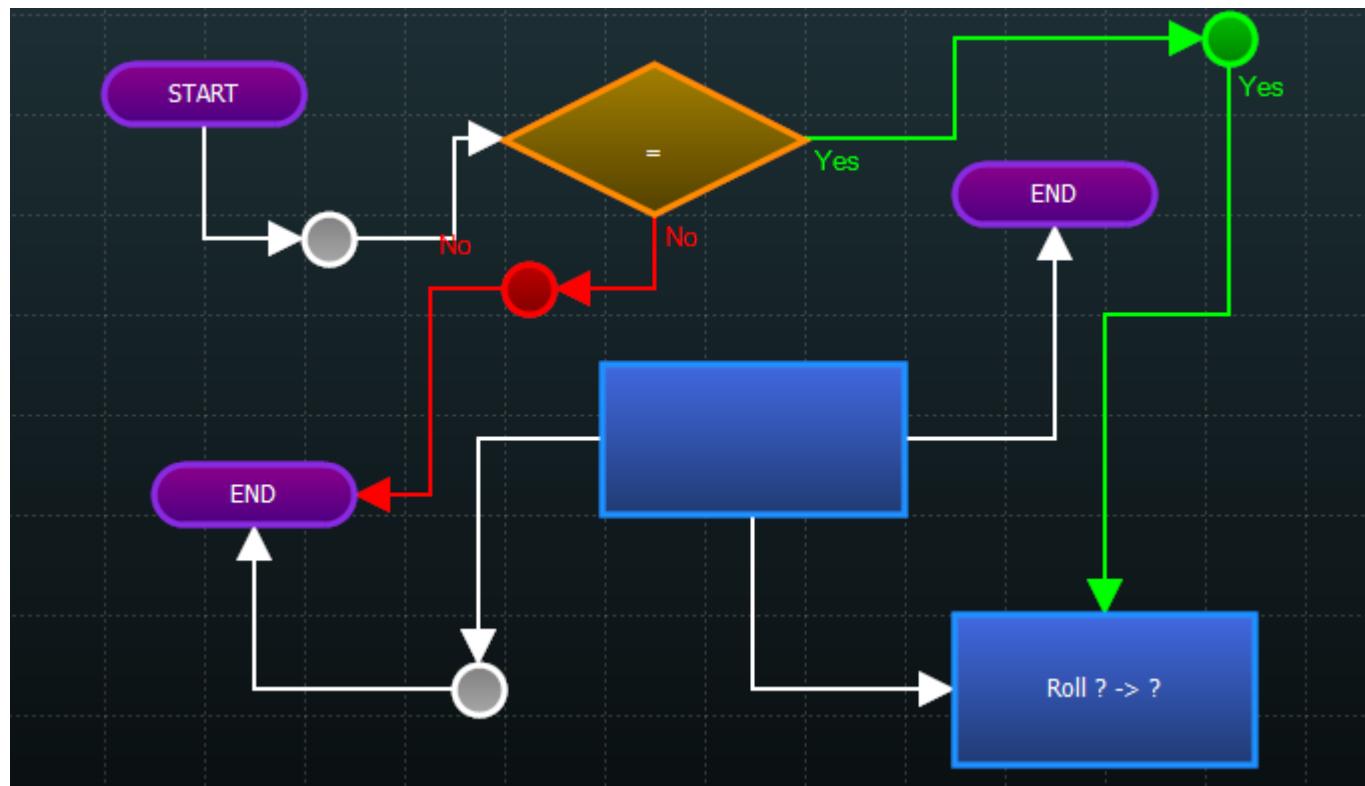

For Buy and Sell Actions there is the [Smart Move](#) function that automatically change orders according to your settings. For more informations on [Smart Move](#), system click [here](#).

Junction

By clicking **Junction** it is possible to insert the object "Junction" for the "Link". The Junction needs only to improve the look of a Plan in case there are many links with some overlap

The status of a Plan

	Name	Status	Active
	New Workflow 1	Active and Enabled	<input checked="" type="checkbox"/>
	New Workflow 2	Inactive	<input type="checkbox"/>
▷	New Workflow 3	Editing	<input type="checkbox"/>
	New Workflow 4	Working	<input checked="" type="checkbox"/>
	New Workflow 5	Active but Disabled	<input checked="" type="checkbox"/>

A Plan can be: Active but disabled, Active and Enabled, Inactive, in Editing or Working. The status of each plan is shown to the left of the name and it is of immediate identification. When a plan is activated and enabled the system evaluates the set condition and executes related actions while in all other cases it does not take place no verification.

If a Plan is in the process of editing Iceberg is not checking the conditions set. In order to exit from "Editing" you have to press "Apply Changes" if you want save your changes or press "Cancel Changes" to delete them.

When a Plan runs it takes the status of Working.

Creation of a Plan

Now let's see how to proceed to the implementation of a Plan by analyzing all the steps to proceed correctly.

1. The Strategy

Since the Plan will establish the rules / conditions the occurrence of which will be carried out actions (buy or sell futures, stock ok options), **basic requirement** for the proper operation of the Plan is that the section **General** must contain all asset which will be used in it.

Example: the initial strategy is composed by 5 put strike 10, we suppose when the condition xyz happen the plan will close put 10 and it will roll the put on strike 9.

To do this, it is necessary that in the strategy are present put 10 and 9

As you can see from the image in the strategy there are the puts sold 10 and the put 9 (with quantity

General	In Session	Net Result	At Now	Realized	Broker Costs	Margin (Theoretical)	Value at Risk	Days to Expiries	Max Profit	Max Risk												
	YES	€ 65,00	€ 65,00	€ 0,00	€ 0,00	€ 694,64	€ 691,04	91	€ 802,50	-€ +Infinito												
Drag a column header here to group by that column																						
Charts	Name	Symbol Type	Strike	Expiry	Qty	Bid	Ask	Last	Avg. Price	Implied Vol. %

Analysis	Chain	Real Time	Add	Delta	Vol. %	Bid	Ask	-	Qty	+	Expiry	Strike	-	Qty	+	Bid	Ask	Vol. %	Delta	Add	Real Time	
Hedging	Start	-	-	-	-	-	-	-	0	+	-	-	-	0	+	0,0403	0,0403	-	-0,04	-	Start	
	Start	+	1	27,9	4,0235	4,0235	-	-	0	+	8,8	-	-	0	+	0,001	0,001	26,3	0	+	Start	
	Start	+	1	27,9	3,825	3,825	-	-	0	+	9	-	-	0	+	0,1335	0,193	57,8	-0,09	+	Stop	
	Start	+	0,99	27,2	3,331	3,331	-	-	0	+	9,5	-	-	0	+	0	0	0	0,2	0	+	Start
	Start	+	0,98	26,1	2,841	2,841	-	-	0	+	10	-	-	-5	+	0,253	0,295	52,8	-0,14	+	Stop	

To add an option with quantity 0 you must click on the "+" button of [Options Chain](#).

2. Basic settings of the Plan

From the section Plan first click  to create a new Plan.

Name	Status	Active
Rolla Put 10 a Strike	Editing	<input type="checkbox"/>

Editing: Click Apply to save changes

START

Rolla Put 10 a Strike

Plan Properties

Name:

Check Every: minutes

Order Place Mode:

Real-Time Data Filters

Max Bid/Ask Spread % (Options):

Tick is not Zero:

Max. Tick Duration (secs.):

Check Bid/Ask (Underlyings): NOTE: Last always

Check Last (Options): NOTE: Bid/Ask always

Options presents different price peculiarities, for example very high bid-ask spreads. You can select how to check for prices correctness.

Quick Start

- Click on New or Edit plan to edit
- Edit plan properties
- Place Start object on chart
- Place other objects on chart as needed
- Place End object on chart
- Link objects with Generic, Yes or No links
- Select the object on chart to edit properties
- Click Apply to save changes

is under Editing, the first thing to do when you create a Plan is to give it a name because in the case

of more plans on a same Strategy, these are listed and sorted by name.

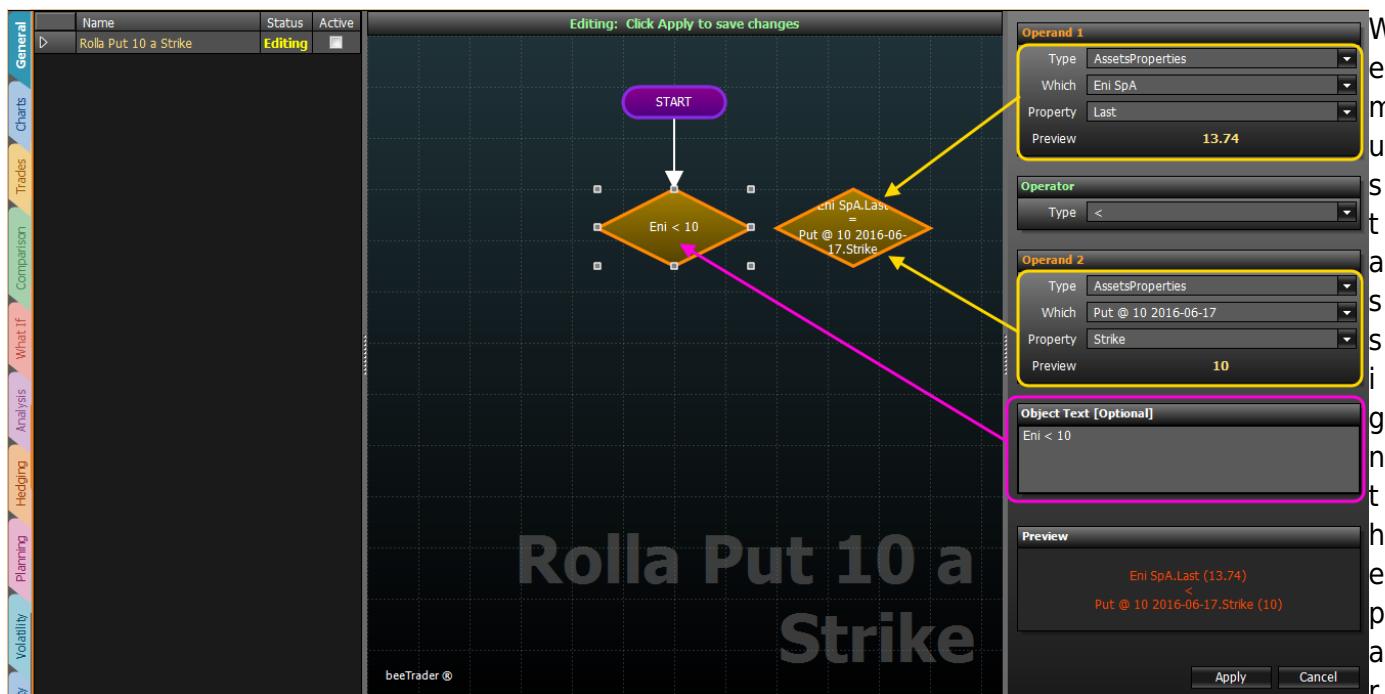

Once assigned the name we have to proceed with the insertion of the object **Start** with the button

3. Settings of Conditions

At this point we insert the object **Condition** with the button

ameters that the Plan will verify. For example suppose when the underlying Eni will arrive at 10 we want that the Plan will do a thing (which will be specified).

In Operand 1 we choose AssetsProperties → Eni → Last (the Preview shows the current value), in Operator we choose \leftarrow , in Operand 2 we choose AssetsProperties → La Put 10 → Strike (the Preview shows the current value).

In the Preview, on the low, we can read what we have set, if it is alright we press "Confirm" to save the conditions.

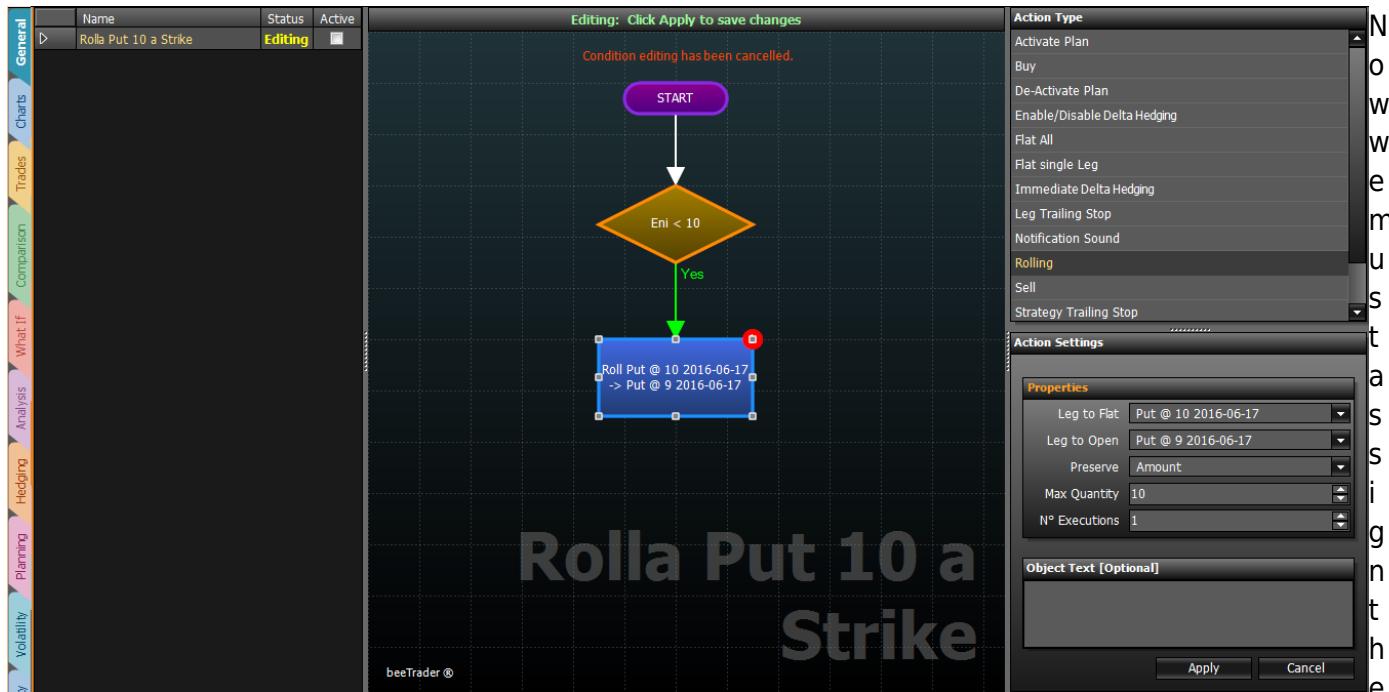

Every object must be connected to each other, with the button

In the example there are two conditions equal to show the operation of the "Text" Object [Optional] so, everything is written here is placed on the sketch of the plan in order to make easier the lecture.

4. Actions Setup

After we insert the object **Action** with the button .

action that the Plan will run upon the occurrence of the condition set above. In the example we used a

green , so the action will be executed whether the condition will be verified. It also possible to

insert a red . In this case the action will be executed whether the condition will not be verified.

In order to execute a rolling, we have to set Put 10 in “flat” and Put 9 in Leg to Open.

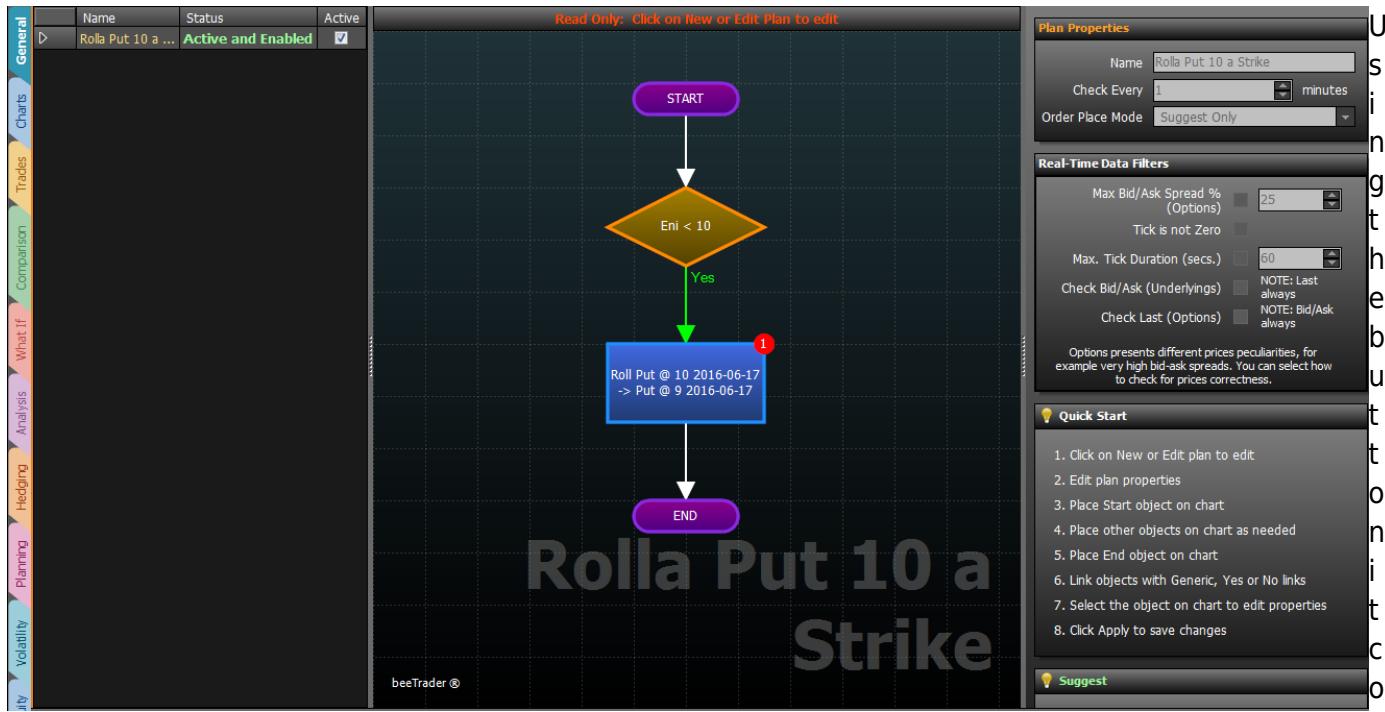

There are other parameters to set, for example “Preserve” which needs to keep the initial premium (however you can set a maximum number of contracts in in “Max Quantity”), or the number of contract. In the exemple the plan Nell'esempio il plan will attempt to sell the same initial premium but with a maximum of 10 contracts respect to the initial 5.

In “Reps” we sets the number of times the action have to be performed. Finally we click “Confirm”. On the figures of the actions are present red circles on which are reported the number of repetition still to be executed.

5. Plan Conclusion

At this point we have to conclude the plan with the object

nects the object End. Now the Plan is complete but it is still in Editing. In order to enable it we have to

confirm the changes with the button

Test of a Plan

Once we have create a plan we can test it.

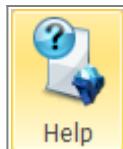

In Iceberg, just for this purpose, there is the Simulation function. The user can create a graph of the underlying in order to check how the plan perform in every market condition that he think it can happen. The options are priced with **Market Maker** an exclusive of Iceberg.

The menu

 Add Segment	it allows to add a graphic segment, The dates and the prices of begin and end are to be set
 Remove Segment	it allows to remove a previously-added segment of the chart
 Re-Generate	it allows to generate a new graph with the same parameters of the segments that compose it
 Expires	it allows to choose which expires highlight on the underlying graph
 Reset Zoom & Pan	it allows you to restore the original zoom on the underlying chart

 Save as Image	it saves the underlying chart in image format (*.png)
 Print	it allows to print the graph of the underlying. Feature available on the PC in use if there is a printer
 Reset Zoom & Pan	it restore the original zoom of the payoff
 Cross Hair	it enable or disable the crosshair for the payoff
 Save as Image	it allows to save the payoff in image format (*.png)
 Print	it allows to print the payoff. Feature available on the PC in use if there is a printer
 Goto Start	it remove a previously-added segment of the chart
 Previous Point	it allows you to place the simulation on the previous step of the underlying chart
 Next Point	it allows you to place the simulation on the next step of the underlying chart
 Play	it allows you to enable scrolling point by point of the underlying graph
 Stop	it allows you to disable the scrolling point by point of the underlying graph

it opens the online manual page on the default Internet browser

Chart Builder

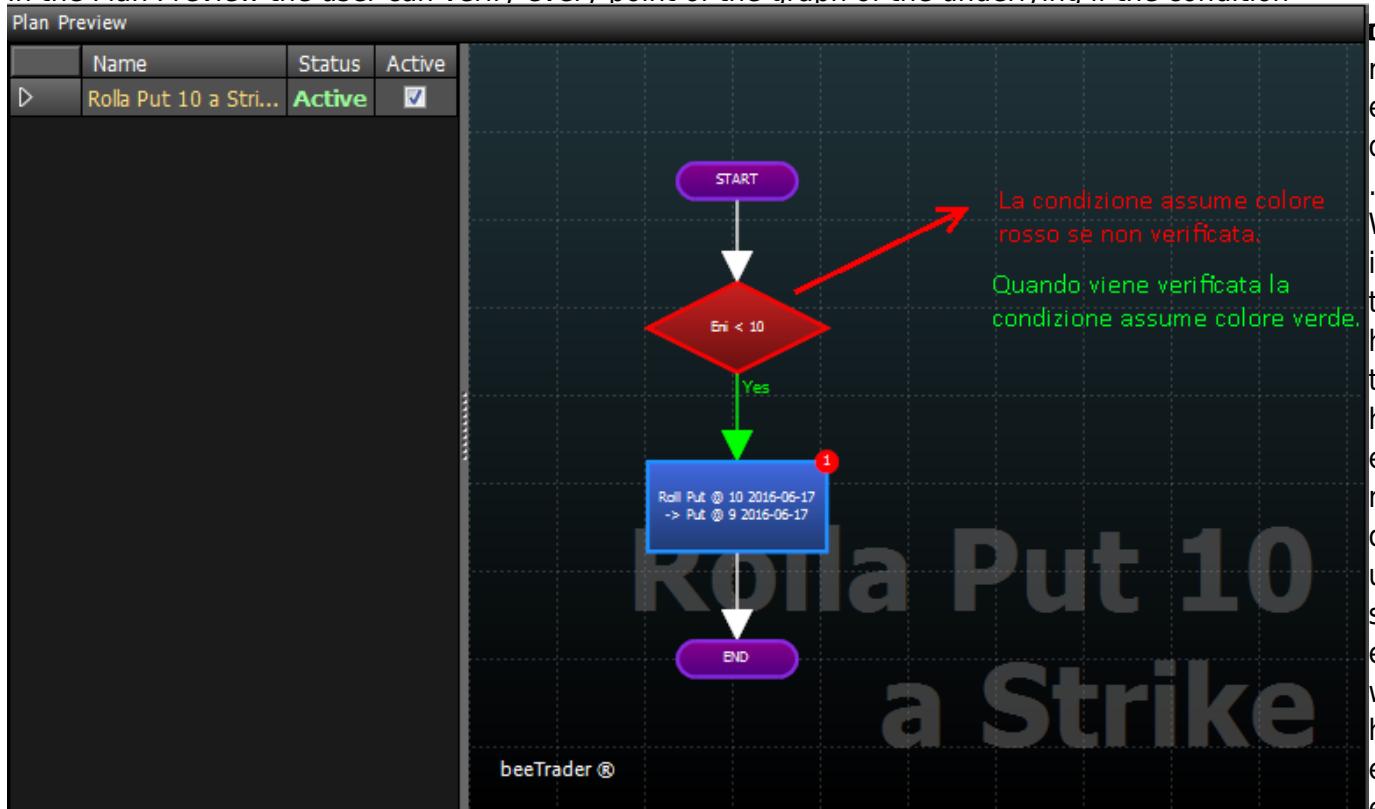

an set the different segments that will make up the underlying graph. For each segment, you can set start and end date, start and end price.

In while you create the segments, the graph is composed randomly, assuming the trend of the underlying between the dates and the prices set by the user.

The fields Start Date, End Date, Start Price e End Price are editable, others fields are calculated and gives an indication of the deviation of prices set.

Plan Preview

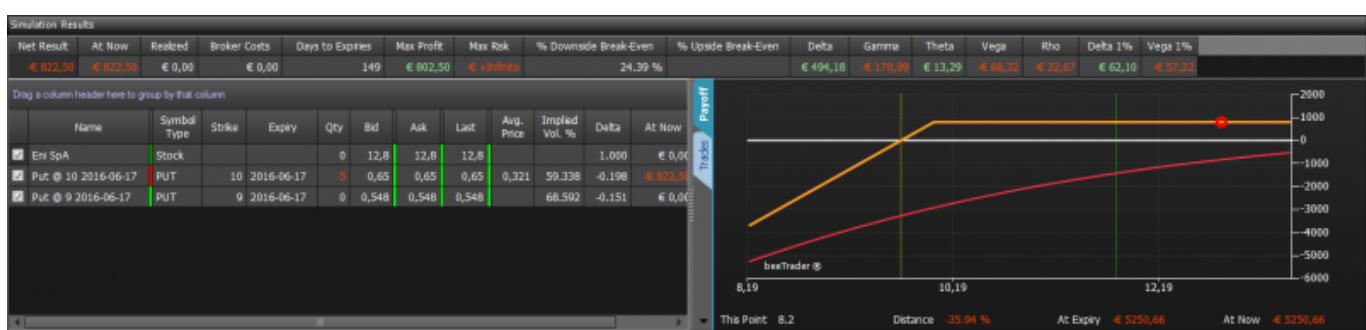

In the Plan Preview the user can verify every point of the graph of the underlying if the condition

you can zoom the plan.

Simulation Results

In this section the user can check for each point of the underlying chart the parameters of its strategy, and possible actions of workflow.

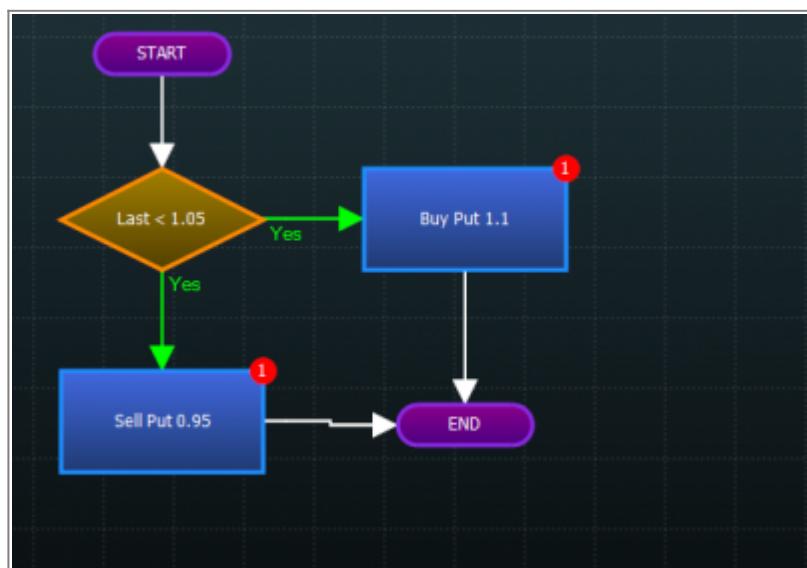

In the two images we see the difference between the initial strategy and after the execution of the simulation. At first the strategy was composed of 5 short put with strike 10 and with underlying at 12,8. Proceeding with the simulation the underlying went to 9,84 (therefore less of the put strike) so, as set in the plan, put 10 were bought and put 9 were sold sono state ricomprate le put 10 e vendute le put 9, maintaining the initial premium. The payoff has been kept selling 8 contracts.

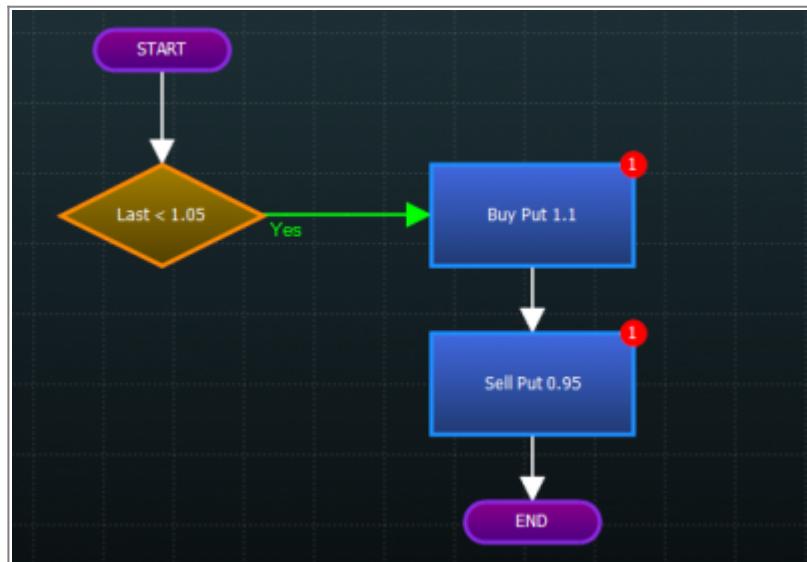

Tips

1. How to perform two actions upon the occurrence of a Condition

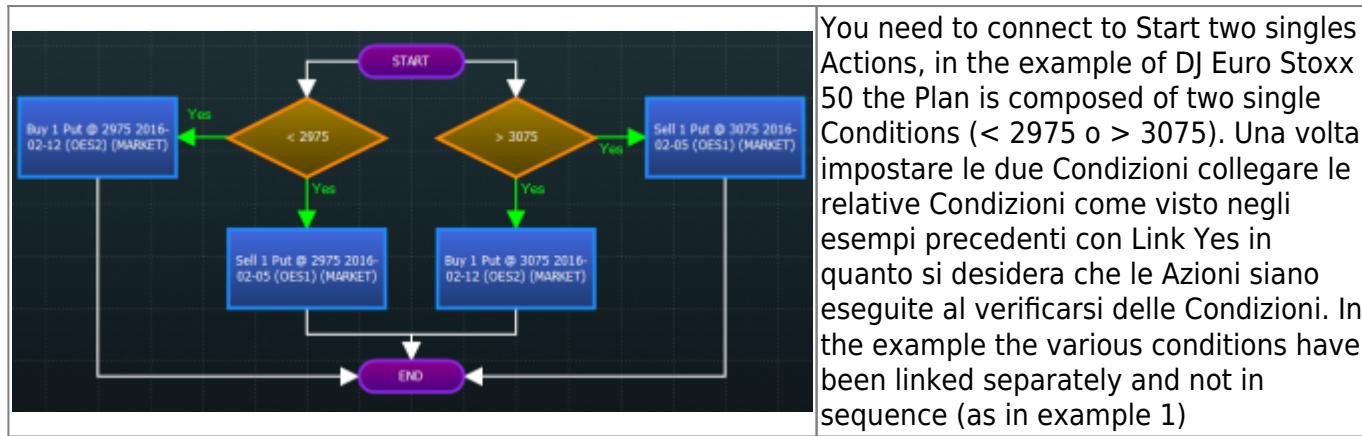

To perform two actions upon the occurrence of a single condition you can use two links Yes. They exit from the conditions and they connect two actions. In the example at the occurrence of Condition Last < 1.05 , the Put 1.1 is bought and Put 0.95 is sold

2. How to perform an action only when the previous is already performed

You need to connect the first action to the second via a Generic Link. In the example the action "Sell Put 0.95" is executed only if the "Buy Put 1.1" action is already executed . The Plan, when the condition Last < 1.05 is satisfied, first it buy Put 1.1 an then it sell Put 0.95

3. How to set two conditions with their actions
