

What-If

In this section you have the opportunity to check what will happen to its strategy in the market conditions that you assume. Starting from the basic strategy, you can change the date, the price of the underlying and volatility and test up to four possible future moves.

The theoretical prices used in the What-If are calculated with the new Internal Market Maker Iceberg, prices do not move only according to the user's assumptions, but also with the volatility surface to which user wants to refer.

The internal [Market Maker](#) acts in the same way the real [Market Maker](#) acts under the same market conditions

 Save as Image	it allows you to save the Payoff of Strategy currently in use in image format (*.png). The image will be saved to the Pictures folder of beeTrader, in the user's Documents
 Print	It allows you to print the Payoff of Strategy currently in use. Feature available on the PC in use if there is a printer

Example of What-If

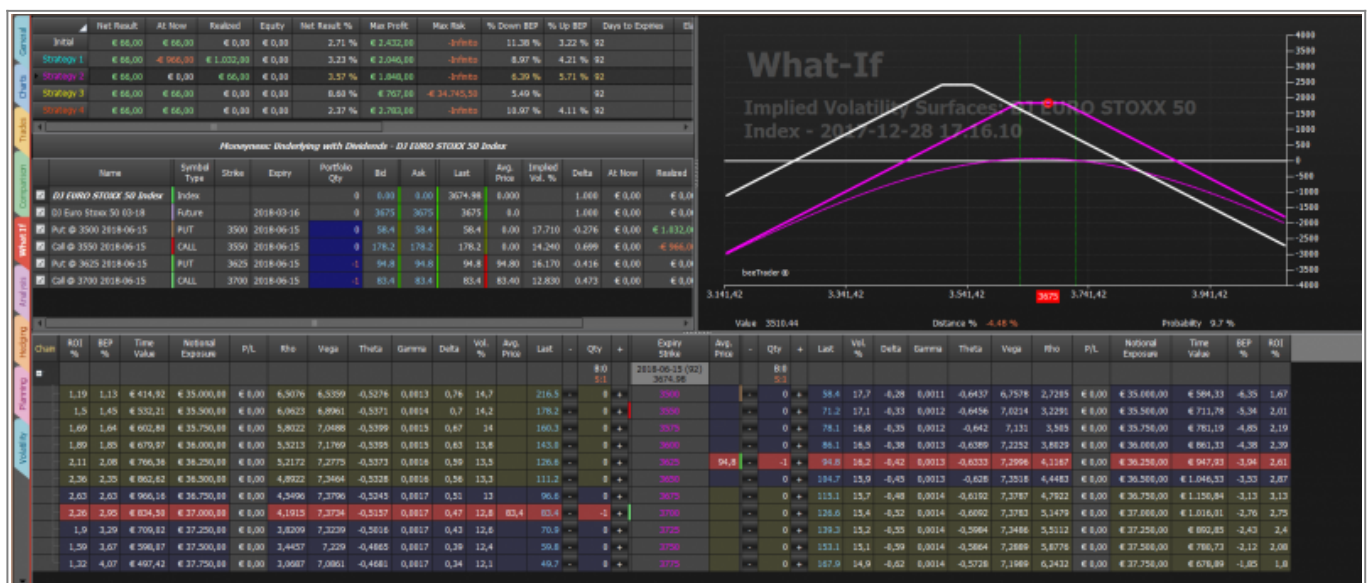

1. Suppose we have a strangle on FTSE MIB 40 Index with the underlying at 17000, therefore - 1 put 15000 e - 1 call 19000 on expiry 06/2016

2. Switching on What-If tab we can see that all properties (main strategy and the four possibilities of what-if, are equal). Next to it there is the panel that lets you to set the parameters like future underlying price to see what would happen to the strategy in those conditions

3. For example whether the price going to 19000 on 20/05/2016.

4. The put 15000 gain 762,50 € while the call 19000 loss 770,00€. At this point you can use the four strategies available to study what you would do

All changes made to the starting strategy are saved in [What-If History](#), dove verrà creata una nuova sezione per ogni nuova sezione di What-If effettuata sulla strategia. \
